

User Manual

821121-ATA-PAK

IMPORTANT SAFETY INSTRUCTIONS

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Do not use this product near water places such as bath tub, wash bowl, kitchen sink, laundry tub, wet basement, swimming pool, etc.
2. Avoid using a telephone (other than the cordless type) in stormy weather. There may be a remote risk of electric shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use the power cord and batteries only indicated in this manual. Do not dispose batteries in a fire, which may cause explosion. Check with local codes for the possible special disposal instructions.
5. Plug the power adaptor into a power outlet which is near the equipment and easily accessed.

SAVE THESE INSTRUCTIONS

FCC PART 15

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed or not used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by taking one or more of the following measures:

- ✧ Reorient or relocate the receiving antenna.
- ✧ Increase the separation between the equipment and receiver.
- ✧ Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- ✧ Consult the dealer or an experienced radio/TV technician for help.

Notes: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) The device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Model: Analog Telephone Adaptor - 821121-ATA-PAK

Section 1 Installation

The 821121-ATA-PAK is an all-in-one VoIP integrated device designed to be a total solution for networks providing VoIP services.

This ATA functions are available via a regular analog telephone.

The following photo illustrates the appearance of the 821121-ATA-PAK.

Connection Diagram for the 821121-ATA-PAK

The 821121-ATA-PAK has one PHONE port, one LINE port, one WAN port, one LAN port, and one power port.

Please follow the following steps to install an 821121-ATA-PAK:

1. Connect a standard touch-tone analog telephone to the PHONE port.
2. Insert a standard RJ11 telephone cable into the LINE port and connect the other end of the telephone cable to a wall jack.
3. Insert an Ethernet cable into the WAN port and connect the other end of the Ethernet cable to an uplink port (a router or a modem, etc.)
4. Connect a PC to the PC port of the ATA.
5. Insert the power adapter into the power port and connect it to a wall outlet.

Section 2 What is Included in the Package

The 821121-ATA-PAK package includes:

1. One 821121-ATA-PAK Unit
2. One Ethernet Cable (3m)
3. One Power Cord

Section 3 Wall Mount instructions

The 821121-ATA-PAK has two wall-mount slots on its back panel. Instructions for wall mounting are given below.

1. Determine the mounting location for the 821121-ATA-PAK.
2. Drill two holes into the wall. Make sure the holes are 50 mm (2 inches) apart.
3. Insert a screw into each hole, and leave 5 mm (0.2 inches) of its head exposed.
4. Maneuver the 821121-ATA-PAK so the appropriate slots line up with the two screws.
5. Place the wall-mount slots over the screws and slide the 821121-ATA-PAK down until the screws fit snugly into the wall-mount slots.

Section 4 Product Overview

4.1 Key Features

- Supports SIP 2.0(RFC 3261), TCP/UDP/IP, RTP/RTCP, HTTP, ICMP, ARP, DNS, DHCP , NTP, PPPoE, STUN, TFTP, etc.
- Powerful digital signal processing (DSP) to ensure superb audio quality.
- Supports various codecs including G.711 (a-law and u-law), G.723.1 (5.3K/6.3K), and G.729A/B
- Supports out-of-band DTMF via RTP (RFC2833) or SIP INFO.
- Supports Caller ID/Name display.
- Supports Call Hold, Call Waiting/Flash, Call Transfer, and Call Forward.
- Supports automated NAT traversal without manual manipulation of firewall/NAT
- Supports QoS
- Supports device configuration via built-in IVR or Web browser
- Supports firmware upgrade via FTP.

4.2 Hardware Specification

The table below lists the hardware specification of the 821121-ATA-PAK

WAN interface	1xRJ45 100Base-T
LAN interface	1xRJ45 100Base-T
FXS telephone port	1xRJ11
PSTN port	1xRJ11
LED	VoIP/PSTN, POWER (The POWER LED is green. The VoIP/PSTN LED is bicolor yellow/green.)
Dimension	118mm (W) 74mm (D) 28mm (H)
Weight	Approximately 200 g
Temperature	Operating temperature 0 °C to 40 °C
Humidity	Operating Humidity 10% to 95% (non-condensing)

Section 5 Basic Operations

5.1 Keypad Commands You can use an attached PSTN phone to configure the System and find setting information. The table below gives the codes and their function.

Function	Menu Choice	Notes
Check IP Address	#90#	IP address will be spoken over the handset of the attached telephone
Factory Reset	#98#	All user defined settings will be lost including network and service provider data.
Switch to PSTN	#99#	Unit will switch to PSTN calling
Set DHCP	#111#	Unit will switch to DHCP
Check IP Type	#121#	IP Type will be spoken over the handset of the attached telephone
Check Network Mask	#123#	Network Mask will be spoken over the handset of the attached telephone
Check Gateway IP Address	#124#	Gateway IP Address will be spoken over the handset of the attached telephone
Check Primary DNS Server IP Address	#125#	DNS Server IP Address will be spoken over the handset of the attached telephone
Check Firmware Version	#128#	Firmware version will be spoken over the handset of the attached telephone

5.2 Set up

The setup of the 821121-ATA-PAK is best done built-in web pages. To access the web pages, the WAN port IP address is required. The 821121-ATA-PAK is equipped with voice prompts to read these addresses. See table above.

5.3 Make Phone Calls

5.3.1 Placing a call

- a) Dial the number and wait for 5 seconds. Or
- b) Dial the number and press “#”

5.3.2 Other Functions Available during a Call

During a call, the following functions are available: call-waiting/flash, and call-forward.

5.3.3.1 Call Waiting/Flash

When you are talking on the phone and another call comes in on your phone extension, a short tone sounds in your handset. You can then either take the call or ignore it.

5.3.3.2 Call Forward

This function is set in the configuration page. Please refer to section 6.2.4 for more detailed information.

5.3.4 Send and Receive PSTN Calls

Users can send and receive calls from the PSTN. To receive PSTN calls, just take the phone off hook when it rings. To make a PSTN call, press #99#. Wait for the PSTN dial tone and dial the PSTN number.

5.3.5 PSTN Backup

The default calling method of the 821121-ATA-PAK is VoIP. However, if the AC power or the WAN connection fails, the user will still be able to make and receive calls over the PSTN.

5.3.6 Send and Receive VoIP Calls

Users can send and receive calls from VoIP. To receive VoIP calls, just take the phone off hook when it rings. To make a VoIP call, just dial the number.

5.4 LED Light Pattern Indication

The following table shows the LED light pattern indication.

LED	DESCRIPTION
Power	When the device is on, this LED will be green.
VoIP/PSTN	1. When making or receiving a VoIP call, this LED will be Yellow. 2. When making or receiving a PSTN call, this LED will be Green.

Section 6 Configuration Guide

6.1 Web Browser Interface

The 8211 provides a built-in web server so a web browser can be used to configure it.

First input the IP address of the 8211 in the web browser address bar. The address must begin with `http://` and end with the port number `“:9999”`. Ex: `http://192.168.1.100:9999`. You will then see the screen below.

A screenshot of a web browser window displaying a login page. The page has a yellow background and a dark red header bar with the text "Login VoIP" in white. Below the header, the text "Enter your username and password to login" is centered, followed by "VoIP server". There are two input fields: "Username" and "Password", each with a corresponding text label to its left. At the bottom of the form, there are two buttons: "Login" and "Clear".

Login VoIP

Enter your username and password to login
VoIP server

Username

Password

Enter your username and password into the fields. The default settings are:

Username: root

Password: test

Click the “Login” button and you will be taken to the System Information page. From this page, you can configure any feature of the 8211.

If you change any settings in the Web Management interface, you must click the “Submit” button in that page. After you finish all the changes you wish to make, click the “Save Change” function on the left side of the screen, then click the Save Button. After the changes are saved, the 8211 will automatically reboot.

6.2 Web Interface Detailed Information

6.2.1 System Information

This page displays the 8211 system current system information such as firmware version, codec version and hardware revision level. Other functions are available on the left side of the screen.

6.2.3 Phone Setting

This page allows you to configure various parameters associated with the attached PSTN telephone.

6.2.3.1 Call Forward

The 8211 supports three types of Call Forwarding: All Forward (Immediate), Busy, and No Answer. You may select any of these modes and also enter a forwarding destination for each mode. The final choice is the No Answer Forward Time Out. This is the number of rings before a call is forwarded in No Answer Forward.

6.2.4.3 TCP/IP Configuration

From this section of the page, you can configure the network addressing. You can select DHCP, Static or PPPoE addressing. If needed, you can then enter the appropriate values for the 8211's IP address, gateway address, DNS server addresses and subnet mask. The MAC address is also displayed, but this is set at the factory and should not be changed.

6.2.4.4 PPPoE Configuration

If you select PPPoE addressing from the TCP/IP configuration section, you can enter your login information here.

6.2.4.5 Bridge

If this is set to YES, the 8211 becomes a network bridge and the device connected to the LAN port can obtain an IP address from the network DHCP server.

6.2.4.6 DDNS Settings

The 8211 supports Dynamic DNS. This page allows you to configure those settings.

The IP address of the SIP Proxy server.

6.2.5.1.7 Outbound Proxy

The IP address of the SIP Outbound Proxy server.

6.2.5.1.8 Status

Displays either Registered or Not Registered

6.2.5.2 Port Settings

You may configure the SIP Port and the RTP port here. The normal SIP port is 5060.

The image shows a web-based configuration interface for VoIP settings. On the left is a vertical yellow sidebar with a 'VoIP' logo at the top. The sidebar contains a list of menu items: 'Phone Book', 'Phone Setting', 'Network', 'SIP Settings', 'NAT Trans.', 'Others', 'System Auth.', 'Save Change', 'Update', and 'Reboot'. Each item has a right-pointing arrow. The 'SIP Settings' item is highlighted. The main content area is titled 'Port Settings' in a dark red font. Below the title is a horizontal line. There are two rows of input fields. The first row is for 'SIP Port', with a text box containing '5060' and a range '(10~65533)'. The second row is for 'RTP Port', with a text box containing '60002' and a range '(10~65533)'. Below these fields are two buttons: 'Submit' and 'Reset'.

Port Type	Current Value	Valid Range
SIP Port	5060	(10~65533)
RTP Port	60002	(10~65533)

6.2.5.3 Codec Settings

You may choose codec settings on this page.

Codec Settings

Codec Priority	
Codec Priority 1:	G.711 u-law
Codec Priority 2:	G.711 a-law
Codec Priority 3:	G.723
Codec Priority 4:	G.729
Codec Priority 5:	G.726 - 16
Codec Priority 6:	G.726 - 24
Codec Priority 7:	G.726 - 32
Codec Priority 8:	G.726 - 40

RTP Packet Length	
G.711 & G.729:	20 ms
G.723:	30 ms

G.723 5.3K	
G.723 5.3K:	<input type="radio"/> On <input checked="" type="radio"/> Off

Voice VAD	
Voice VAD:	<input type="radio"/> On <input checked="" type="radio"/> Off

6.2.5.3.1 Codec Priority

Choose the selection order of the codecs. The 8211 supports the following codecs: G.711a, G.711u, G.729, G.723, G.726-16, G.726-24, G.726-32, and G.726-40.

6.2.5.3.2 RTP Packet Length

This allows you to set the length of RTP packets when using G.711, G.729 or G.723 codecs.

6.2.5.3.3 G.723 5.3K

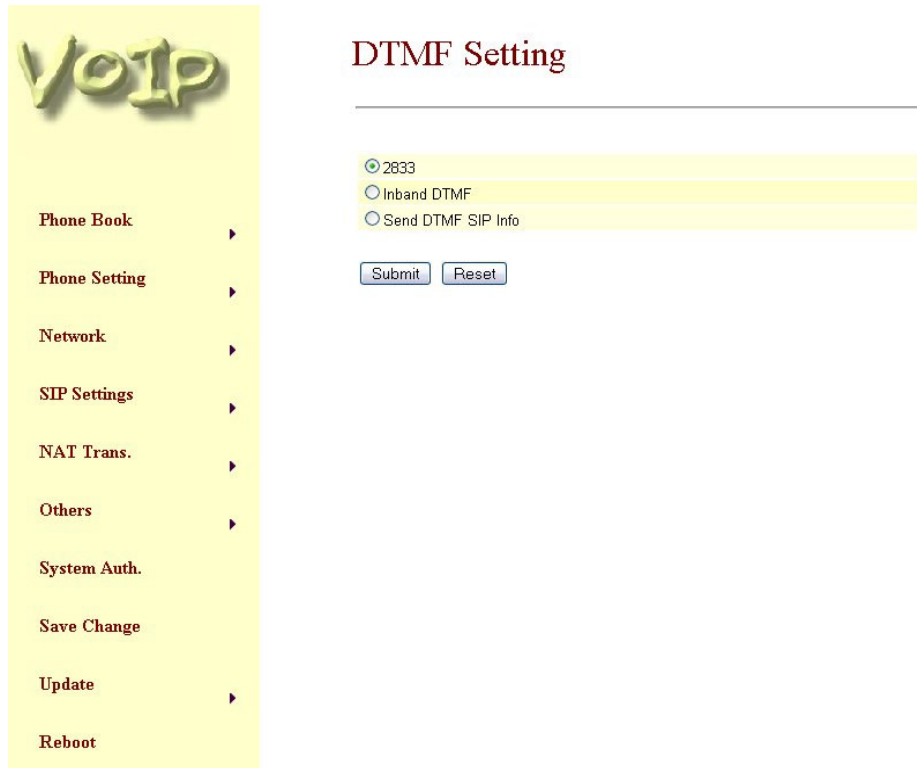

Allows you to select 5.3 kbs compression rate for G.723. If you select NO, the compression rate will be 6.3 kbs.

6.2.5.3.4 Voice VAD

Allows you to turn on Voice Activity Detection.

6.2.5.4 DTMF Setting

The 8211 supports three methods of DTMF delivery. They are RFC2833, Inband, and SIP INFO. RFC2833 signals DTMF messages using RTP. Inband signals DTMF by encoding the tones and passing them in the same manner as speech. SIP INFO signals DTMF messages using the INFO method of the SIP protocol.

The screenshot displays a web interface for configuring VoIP settings. On the left is a vertical yellow sidebar with a 'VoIP' logo at the top. The sidebar contains a list of menu items: 'Phone Book', 'Phone Setting', 'Network', 'SIP Settings', 'NAT Trans.', 'Others', 'System Auth.', 'Save Change', 'Update', and 'Reboot'. Each item has a right-pointing arrow. The 'SIP Settings' item is highlighted. The main content area has a title 'DTMF Setting' in red. Below the title is a horizontal line. There are three radio button options: '2833' (selected), 'Inband DTMF', and 'Send DTMF SIP Info'. At the bottom of the main area are two buttons: 'Submit' and 'Reset'.

Other Settings

Hold by RFC:	<input type="radio"/> On	<input checked="" type="radio"/> Off
Voice QoS:	00	(0~63)
SIP QoS:	00	(0~63)
SIP Expire Time:	360	(60~86400 sec)

6.2.5.6.1 Hold by RFC

You can choose what method will be used to place calls on hold.

6.2.5.6.2 Voice QoS

If your network supports Voice Quality of Service (QoS) then you can adjust the packet size here.

6.2.5.6.3 SIP QoS

If your network supports SIP Quality of Service (QoS) then you can adjust the packet size here.

6.2.5.6.4 SIP Expire Time

This is the time in seconds for which a SIP connection will be maintained with no activity.

6.2.6 NAT Trans

6.2.6.1 STUN Setting

This page allows you to use a STUN server and to specify its address and port.

6.2.7 Others

6.2.7.1 Auto Configuration Setting

In the future, the 8211 will allow you to enter configuration settings in a text file on a server. These will then be read by the 8211 and configuration changes will be made with no additional user intervention. This feature will be implemented on a coming firmware release.

The screenshot displays a web-based configuration interface for VoIP settings. On the left is a yellow sidebar menu with the 'VoIP' logo at the top. The menu items are: Phone Book, Phone Setting (highlighted in red), Network, SIP Settings, NAT Trans., Others, System Auth., Save Change, Update, and Reboot. The main content area is titled 'Auto Configuration Setting' in red. It features three radio buttons for 'Auto Configuration': 'Off' (selected), 'By TFTP', and 'By FTP'. Below these are five input fields: 'TFTP Server' (containing '192.168.250.238'), 'FTP Server' (containing '0.0.0.0'), 'FTP Username', 'FTP Password', and 'File Path'. At the bottom of the form are 'Submit' and 'Reset' buttons.

File Path:	<input type="text"/>
<input type="button" value="Submit"/> <input type="button" value="Reset"/>	

6.2.7.2 ICMP Setting

This allows you to control whether or not the 8211 will respond to a PING from another device. Please note that the default setting is NO for NOT ECHO. In other words, the unit will echo to a PING.

6.2.8.1.1 Administrator

This page allows you to change the Administrator user name and password. The Administrator has total control over the system.

6.2.8.1.2 Normal User

This page allows you to change the Normal User user name and password. Normal users can only change basic features of the system.

6.2.8.1.3 Transfer to PSTN Key

This allows you to change the key code to switch to PSTN. The default code is #99.
